

## **ENCOR v1.1 (350-401) Video Training Series**

### **Module 6 – Lesson 3 Quiz**

#### **Questions**

1. NETCONF supports what type of data formatting?
  - A. XML
  - B. JSON
  - C. HTTP
  - D. HTTPS
  
2. What HTTP verb is used by REST create (not update) a new configuration?
  - A. GET
  - B. PUT
  - C. PATCH
  - D. POST

## Questions and Answers

1. NETCONF supports what type of data formatting?

- A. XML
- B. JSON
- C. HTTP
- D. HTTPS

**Answer: A**

Explanation: While RESTCONF supports either XML or JSON data formatting, NETCONF only supports XML data formatting.

**Video Reference: NETCONF**

2. What HTTP verb is used by REST to create (not update) a new configuration?

- A. GET
- B. PUT
- C. PATCH
- D. POST

**Answer: D**

Explanation: The POST HTTP verb is used to Create a new entry (e.g. a new configuration), while PUT or PATCH can be used to Update an existing entry. The GET verb, however, only reads information.
